

Don't plumb bore water into your mains supply

It is illegal to modify plumbing on your land without proper approval.

The number of homes accessing bore water has greatly increased over recent years. It is illegal to plumb bore water with your mains supply without the proper approval from your town water supplier.

For this reason:

- Contact your urban water authority for information about modifying your mains supply to incorporate bore water or
- any other source of water.
- You may be asked to install backflow devices at the mains water meter and internal plumbing.
- Installation, if approved, must follow instructions provided by your urban water authority.
- All installations of backflow devices must be carried out by a licensed plumber.
- In areas where there is an increased risk of mains water contamination, annual testing by Plumbing Industry Commission licensed plumbers may be required.

Working with these requirements will assist water suppliers to continue to provide you with a reliable source of water.

To discuss these requirements or to find out more, please contact your local urban water authority.
